

Name of the app: Digital Book Club

Name of the Department/Sector: District Administration.

Target Audience: Students, Book Readers etc.

Objectives: Digital Book Club is all about connecting like-minded people who are readers and wants to share Physical books and post a personalized review of the books on a digital Platform. The core concept of the app is to connect users who wants to share their books with the needy. A seeker can search for a particular book or some types of books using localized geographical search.

In addition to the above there will be a module where a user can donate his/her books to the needy person. For example, after each Academic year many students are promoted to next higher class and their books can be donated to a needy student.

Benefits to the End User: Needy Persons can search for a particular book which may be available with a local book donor.

Platform/ Technology to be used: Flutter, Dart (App). PHP ,MYSQL (Back End)

Any other information your like to give: The name of the app can be changed by District Administration. Also some modules can be modified by District Administration in the course of app development.
